

In the late 1990's, Dr. Maloney wondered if computational design of the antenna structure itself would lead to dramatically improved antenna performance. The answer is yes, and he coined the term fragmented aperture antennas for these non obvious shaped antennnas. This book includes chapters ...

Computational Design of Antenna Structures

Jim Maloney is currently a consulting engineer supporting Compass Technology Group's research efforts.

Previously, he worked at Ga Tech Research Insititute where he originally developed the fragmented aperture antenna.
